Introducing The New R-care

Messenger

The Only Wireless, Mass Messaging and Call Assurance Device Of It's Kind.

- Emergency Evacuation Information
- Police and Fire Emergencies
- Severe Weather Alerting

Now you can send alerts on mass or targeted individually to residents of Independent and assisted living facilities and receive positive confirmation from the responding care giver that is automatically logged into your system. And, when a resident initiates an emergency call, an audible and visual reply is delivered to the resident, reassuring the resident that immediate assistance is on the way.

Specifically Designed for Senior Communities

When an emergency message is transmitted, a loud audible tone works in conjunction with a red flashing LED and a flashing screen to alert the resident of the immediate importance of the message. Non-emergency messages such as activity or meal reminders, can be sent to groups or individuals as well. These messages will activate a flashing green LED, with or without audible tone.

Effective Emergency Communications

Introducing the new R-Care MESSENGER, a compact self-contained wireless wide area alert station that is feature packed and specifically designed for senior communities. It communicates in both audible and visual modes making it ideal for the hearing impaired. When activated, it emits a loud tone followed by a voice message that is simultaneously displayed in large letters on an LCD screen. State of the art text-to-voice technology converts displayed messages into clearly audible and understandable speech. For more information, please call toll free at: 1-800-724-1911.

Features & Specifications

Application

- Senior Communities
- Resident Apartments
- Security Checkpoints
- Caregiver or staff areas

Features

- Reduce overhead noise
- Wireless Operation
- Voice & Text Display of Critical Messages
- Integrates Into R³ Command System
- Easily Mounts to Any Wall
